HR 500 Cermet

HR 500 CERMET

From the beginning of November 2015 all Cermet tipped reamers will be burnished.

The existing tools in stock will be delivered blank. The black surface offers a better protection against corrosion.

Additionally the tools get a better high quality look. The cermet inserts, the shank and the diameter to check the run out error will stay blank.

The new surface does not affect the price

Your benefits:

- HR 500 T high-performance reamers ensure a perfect economically efficient manufacturing process
- Standardized HA shank offers enormous flexibility.
- The HR-500 GT can be extended easily with our standard hydraulic expansion chuck art. 4290
